

Press release from: CAB Incorporated

CAB Incorporated “Goes Green” at Nacogdoches manufacturing/warehouse facility

NACOGDOCHES, TEXAS – December 6, 2006

CAB Incorporated, a world leader in the import and distribution of industrial castings, pipe flanges and wind tower components, today announced it is powering its Nacogdoches facility with 100% renewable electricity.

CAB’s purchase of approximately 1,000,000 annual kilowatt-hours of Renewable Energy Certificates (REC) – an amount equal to its annual electricity usage – reflects its commitment to supporting electricity derived from renewable energy sources such as wind, solar, hydropower and others. RECs, also known as green tags, have evolved as an easy way for businesses to derive their electricity usage from renewable energy sources and create incentives for additional investments in renewable energy sources.

“Electric Choice in Texas gives customers a host of options for products and services to choose from to meet business objectives,” said Terri Jondahl, CEO of CAB Incorporated. “As a key supplier in the North American wind power development industry, we are proud to play our part to protect the environment, promote the benefits of renewable energy and continue the momentum for the development of additional renewable energy sources.”

About CAB Incorporated

Headquartered in Oakwood, Georgia, CAB is a leading supplier of pipe flanges, a wide variety of industrial castings and of large-diameter structural flange rings used in the construction of wind towers throughout North America. For 25 years CAB has served customers not only as a supplier but also as a trusted partner in areas of quality, process improvement, logistics and other international supply chain considerations. In addition to Georgia and Texas CAB has operations in China, India, South Korea and South Africa. For more information, visit www.cabinc.com.
